Work experience

- **Rabbit Internet**, January 2017 – present

  - DevOps Engineer
  - Mainly responsible for the testing environment, using Jenkins to build and monitor fully containerized application ecosystems. All that integrated with GitHub, JIRA and Slack allowing continues development, integration and deployment. Also working on composing docker files for different projects which are then deployed and orchestrated on the production via Kubernetes. Getting experienced with shell scripting, Linux administration, Nginx etc...

- **Rabbit Internet**, October 2015 – January 2017

  - Team Lead developer
  - Working in a multinational company in Bangkok, Thailand, building software using latest technologies (PHP 7, Laravel 5, Postgres, Docker). Started as a Senior Back-end Developer, working on database migration (MongoDB to Postgres) as a process of rewriting legacy system. After that, as a team lead of 6-10 people built SSO (single sign-on) application using microservices architecture design pattern. In an agile environment, we have clearly defined work-flow, that includes writing unit and integration tests, code review and QA manual/automation testing. Using Docker to help us develop and Kubernetes to help us deploy and scale.
